JUNE IS
HURRICANE
PREPAREDNESS
 MONTH

A collection of various emergency supplies and tools arranged in a grid-like fashion. The items include: safety goggles, a respirator mask, a wrench, a jar of peanut butter, a portable radio, a large jug of water, a pair of pliers, a screwdriver, a flashlight, a first aid kit, a bottle of water, a can of food, a stack of blankets, a folder, a roll of paper, and a large grey bag.

Preparing Your Home

⇒ Hurricane winds can cause trees and branches to fall, so before hurricane season trim or remove damaged trees and limbs to keep you and your property safe.

⇒ Secure loose rain gutters and downspouts and clear any clogged areas or debris to prevent water damage to your property.

⇒ Reduce property damage by retrofitting to secure and reinforce the roof, windows and doors, including the garage doors.

⇒

What to do when a hurricane is 36 hours from arriving

Purchase a portable generator or install a generator for use during

⇒ Turn on your TV or radio in order to get the latest weather updates and emergency instructions.

⇒ Build or restock your emergency preparedness kit. Include food and water sufficient for at least three days, medications, a flashlight, batteries, cash, and first aid supplies.

⇒ Plan how to communicate with family members if you lose power. For example, you can call, text, email or use social media. Remember that during disasters, sending text messages is usually reliable and faster than making phone calls because phone lines are often overloaded.

⇒ Review your evacuation plan with your family. You may have to leave quickly so plan ahead.

⇒ Keep your car in good working condition, and keep the gas tank full; stock your vehicle with emergency supplies and a change of clothes.

What to do when a hurricane is 18-36 hours from arriving

⇒ Bookmark your city or county website for quick access to storm updates and emergency instructions.

⇒ Bring loose, lightweight objects inside that could become projectiles in high winds (e.g., patio furniture, garbage cans); anchor objects that would be unsafe to bring inside (e.g., propane tanks); and trim or remove trees close enough to fall on the building.

⇒ Cover all of your home's windows. Permanent storm shutters offer the best protection for windows. A second option is to board up windows with 5/8" exterior grade or marine plywood, cut to fit and ready to install.

What to do when a hurricane is 6-18 hours from arriving

⇒ Turn on your TV/radio, or check your city/county website every 30 minutes in order to get the latest weather updates and emergency instructions.

⇒ Charge your cell phone now so you will have a full battery in case you lose power.

What to do when a hurricane is 6 hours from arriving

⇒ If you're not in an area that is recommended for evacuation, plan to stay at home or where you are and let friends and family know where you are.

⇒ Close storm shutters, and stay away from windows. Flying glass from broken windows could injure you.

⇒ Turn your refrigerator or freezer to the coldest setting and open only when necessary. If you lose power, food will last longer. Keep a thermometer in the refrigerator to be able to check the food temperature when the power is restored.

⇒ Turn on your TV/radio, or check your city/county website every 30 minutes in order to get the latest weather updates and emergency instructions.

After a Hurricane

⇒ Listen to local officials for updates and instructions.

⇒ Check-in with family and friends by texting or using social media.

⇒ Return home only when authorities indicate it is safe.

⇒ Watch out for debris and downed power lines.

⇒ Avoid walking or driving through flood waters. Just 6 inches of moving water can knock you down, and one foot of fast-moving water can sweep your vehicle away.

⇒ Avoid flood water as it may be electrically charged from underground or downed power lines and may hide dangerous debris or places where the ground is washed away.

⇒ Photograph the damage to your property in order to assist in filing an insurance claim.

⇒ Do what you can to prevent further damage to your property, (e.g., putting a tarp on a damaged roof), as insurance may not cover additional damage that occurs after the storm.
